

IMPERIAL

General Installation Instructions for Wall Hung Mirrors and Wall Hung Cabinets (With or Without LED Lighting Kit)

Important Information:

Please check the products for transport damage and that contents are complete before installation.

Consult a qualified plumber if you have any problems installing this product.

Complaints made following installation regarding the above cannot be accepted.

Thank you for purchasing this imperial product. Please take a moment to review this manual before you install your product. If you encounter any installation or performance problems, please do not hesitate to contact us using the phone number listed on the back cover of the booklet.

Upon receiving your product please open all cartons carefully and inspect for any manufacturing defects or transit damage.

 Imperial cannot be held responsible for damaged products after or during their installation.

This installation guide and the fixings provided are intended for fixing into solid walls. If you are installing this product into a stud wall structure or any other type of non solid wall please amend your installation techniques and fixings accordingly.

 Before you start: Check you have the necessary tools for the installation
It is advisable to prepare a clear area to assemble the products.
Lay a soft blanket or sheet to protect the wood finish from scratches.

Tools Required

Hand Held Drill

Safety Goggles

Spirit Level

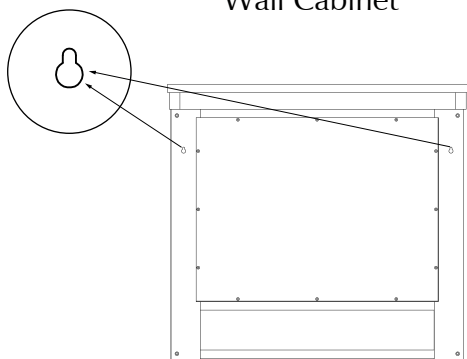

Tape Measure

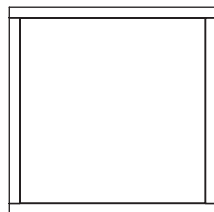

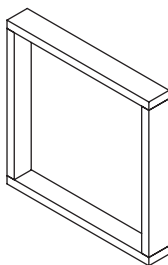

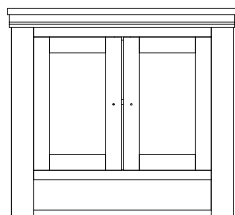

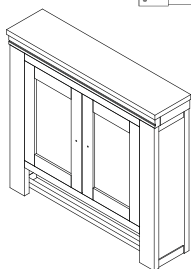

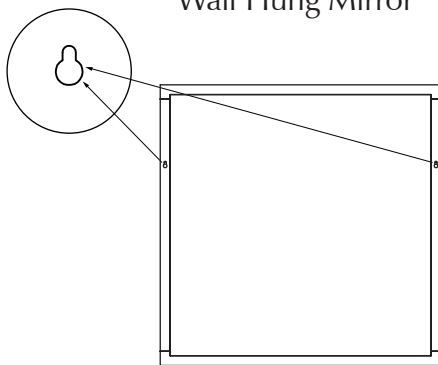

Pencil

1. Measure the distance between centres of the key holes located on the back of the unit.
2. Mark the wall in the required location, ensuring the hole centres are the correct distance apart and at the correct height on the wall. With a spirit level, check that the two horizontal markings are level before drilling holes in the wall surface.
3. Before carrying out the following steps ensure there is no hidden pipework or cables in the area that you intend to drill. Always ensure that you take the necessary safety precautions.
4. Drill appropriate sized holes for the wall fixing
5. Insert wall plugs and tighten screws ensuring enough of a head is left protruding to hang the cabinet.
6. Carefully lower the cabinet onto the screws and check to ensure the unit is secure.

Wall Cabinet

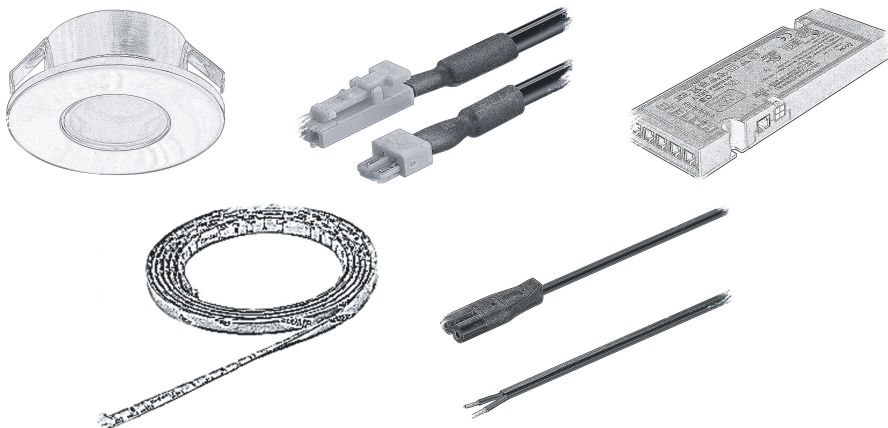

Wall Hung Mirror

CAUTION: Before carrying out the following steps ensure there is no hidden pipework or cables in the area that you intend to drill. Always ensure that you take the necessary safety precautions.

NOTE: It may be wise at this stage to double check that the holes and markings for fixing are correct.

All LED lights/strips are IP44 rated. When assembled and mounted correctly, they are suitable for use in Bathrooms. Whilst lights can be within 60cm of a water source as they are IP44 rated (zone 2), the transformer needs to be at least 60cm away from water as the concealed transformer is IP20 rated (Outside Zone).

Please ensure that the line marked on the rear of the mirror is at least 60cm away from a water source. The transformer is IP20 rated and should be located away from any source of moisture and water and should be installed by a qualified electrician to meet current legislation

Switch off electricity supply at fuse box before and during installation and maintenance. We recommend that the circuit fuse or breaker is withdrawn to prevent accidental switching on whilst work is in progress. A RCD fuse is required in the circuit.

Example of label found on the reverse side of your mirror or cabinet which includes lights.

This label should not be removed.

This way up ↑

This line needs to be a minimum of 60cm from a water source.

Note: Lights - IP44 rated
Transformer - IP20 rated

Must be installed by qualified electrician and an RCD circuit breaker should be used

For more information contact: +44 1922 743074
www.imperial-bathrooms.co.uk

NOTE: All electrical connections need to be installed by a qualified electrician. Discuss with your electrician about switching and position requirements for wall hung cabinets and mirrors.

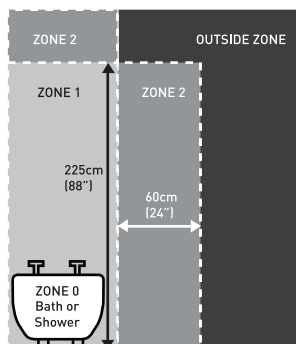

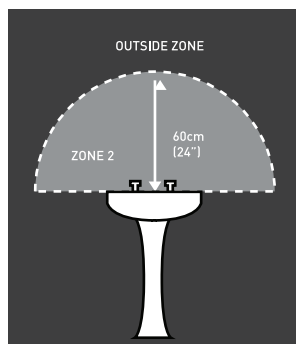

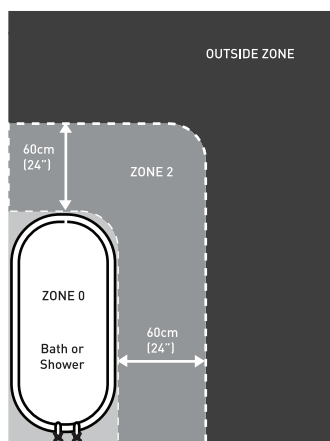

Lighting Zones

Zone 0 - Inside the bath or shower. Any fitting used here must be SELV (Separated Extra Low Voltage - max. 12Volts) and have a minimum rating of IP67 (protected against immersion in water - total immersion proof).

Zone 1 - Above the bath or shower to a height of 225cm. A minimum rating of IP44 is required. Also, subject to IP rating, SELV or 240V luminaires may be used in this zone; if the fitting is 240 volts, a 30mA residual current device (RCD) must also be used to protect the circuit in this zone.

Zone 2 - The area stretching to 60cm outside the bath or shower. An IP rating of at least IP44 is required. Also, subject to IP rating, SELV or 240V luminaires may be used in this zone. In addition, it is good practice to also consider the area around a wash basin (within a 60cm radius of any tap) as Zone 2.

Outside Zone - Anywhere outside zones 0,1 and 2. Here, there is no requirement for any lighting solutions to be protected against particles or solid objects.

Installation & Technical Specs

We recommend that all products are purchased with the assistance of a specialist bathroom retailer and always installed by an experienced installer who is member of a recognised plumbing/electrical association.

All natural wood finishes mature with age and colours may vary slightly from batch to batch or from panel to panel. It is therefore not always possible to achieve a precise colour match when additional items are added at a later date.

Imperial Bathrooms furniture is produced from a combination of solid wood and wood veneer panels, and all sizes quoted are nominal and must be checked against actual product. The timber used is supplied from renewable sources and whilst every care is taken in the manufacture of wooden products inevitably there will always be variation in both colour and grain pattern between individual pieces - indeed this is part of the beauty and unique appeal of using a natural material. Where frosted glass is a feature, only toughened safety glass is used.

Great care is taken to ensure that products supplied by Imperial are supplied to you in perfect condition. Your purchases should, however, be checked for manufacturing defects or damage before any installation work is carried out. We are unable to accept responsibility for any defect which was evident before or has occurred as a result of installation.

Care & Maintenance

You have just acquired a high quality and expensive piece of furniture and are about to put it in the most hostile environment in the house! We have been producing these fine products for many years and our experience is that they will give years of pleasurable service if a few simple measures are taken to look after them.

Bathroom furniture can be wiped over using a damp lint free cloth and dried with a soft duster to prevent watermarks. Never use abrasive cleaning agents or cloths such as linen cloths and paper towels as these will scratch. Under no circumstances should solvent cleaning agents such as nitro-based thinners, acetone, nail polish remover or similar products be used. The use of polishes using silicone or any abrasive materials can damage the wood finish. Natural wax polishes should be used sparingly and applied using a soft dry cloth.

Always use your best efforts to keep the wood surface dry. The finish will deteriorate and the underlying timber could become permanently stained if subjected to long term contact with water.

Glass or mirrored panels cleaned using a non-solvent based glass cleaner and soft cloth.
Avoid liquid running to the base of the mirror as this can cause damage to the mirror and furniture and invalidate any warranty.

Failure to follow these guideline will result in your guarantee being invalidated.
