Gessi Shower Installation Guide

Apply thread tap or another approved sealant to the spigot/nipple. Insert the plate over the arm/dropper and then install the arm/dropper onto the spigot, ensuring it is tight, flush with the wall/ceiling, and that the arm outlet is perpendicular/vertical.

Fit the filter/washer and flow controller into the shower head according to the diagram. Note: The flow controller should be inserted with the protruding side into the showerhead. Be careful not to damage the flow regulator. The flow controller must not be removed.

Fit the shower head onto the arm/dropper and ensure it is firmly tightened to prevent leaks.

The shower head can be adjusted by swiveling into the desired position.

Please Note These showers may not be suitable for use with gravity fed water heaters, low and unequal pressure supply networks, instantaneous water heaters, tempering valves and thermostatic mixing valves.

Installation shall be in accordance with the Plumbing Code of Australia and the **AS/NZS 3500** series of Standards.

All Gessi showers are certified in accordance with **AS/NZS 3662:2005**
