

## ATTENZIONE – WARNING – ATTENTION – ACHTUNG - CUIDADO

### Gessi Tapware Installation Guide

The following information refers to tapware for use in normal domestic and residential (non-commercial) installations.

#### Recommendations:

- i. the product should be installed only by a licensed plumber;
- ii. the product should be installed at a pressure no greater than 500 kPa;
- iii. all water supply lines should be flushed by the plumber before installation.
- iv. the flow controller incorporated in the outlet is tightened to prevent removal by hand, be careful not to damage it and leave it installed (the flow controller must not be removed).

#### Working specifications:

- Maximum

Temperature	60°C
Pressure	500 kPa

Where normal working pressures exceed the maximum stated above, a pressure limiting valve should be installed as excessive pressure may damage the tap.

- Minimum

Temperature	5°C
Pressure	300 kPa

- Maximum difference in pressure between hot and cold supply is 150 kPa
- The recommended operating pressure is between 300 and 500 kPa

Installation shall be in accordance with the Plumbing Code of Australia and the **AS/NZS3500** series of Standards.

All Gessi tapware are certified in accordance with **AS/NZS 3718:2005**

Licence Number:

**WM-021167- WM-022726**
